

PROJECT SANCTUM

Design system, motion language, and interaction model for the pitch deck.

DESIGN TOKENS

 INK · #07090f the void	 KYBER · #67e8f9 sanctum light	 EMBER · #e8b44c attention	 THREAT · #ff3b3b danger only	 BONE · #e8e6df text
--	---	---	---	---

TYPOGRAPHY

- Cinzel (display) — the sacred serif. Titles and headings, steel-gradient fills.
- Space Grotesk (UI) — the honest voice. Body copy and interface text.
- IBM Plex Mono (machine) — the network's whisper. Labels, kickers, transmissions.

MOTION LANGUAGE

- One law: motion must mean something. Nothing shakes for no reason.
- Entrances — kinetic type flips in char-by-char; labels self-decrypt; body blur-in reveals.
- Transitions — a flash → iris-wipe → shockwave ring sequence between slides (never a hard cut).
- Ambient — cursor-driven parallax + per-slide 3D reactivity keep the deck alive without noise.

INTERACTION MODEL

- Navigation — arrow keys, space, [], 1-9/0 jump, wheel, and swipe. Full keyboard + touch.
- Overlays — grid overview (G), help (?), auto-reel (A), panic (~). All reachable and ESC-closable.
- Cursor — a kyber ring + dot with spark trail and click ripples; morphs over interactive elements.
- Reactive — tilt cards, magnetic buttons, char-hover lift, spotlight text, expandable drawers.

ACCESSIBILITY

- prefers-reduced-motion → character animations degrade to simple fades.
- Audio arms only on the first real gesture (autoplay policy), and is mutable (M).
- Contrast — titles hold 9-13:1 against the 3D backdrop (WCAG AA is 4.5:1).
- Touch — on-screen nav buttons appear on coarse-pointer devices.

THE STORY ARCS

- Hearts — the problem slide makes the fear real (survivors can't gather).
- Minds — the craft + stack slides prove it is real, working software.
- Wallets — the why-it-wins slide maps every criterion to a testable feature.
